Using hydrogeomorphic criteria to classify wetlands on Mt. Desert Island, Maine approach, classification system, and examples: USGS Scientific Investigations Report 2005-5244 Martha G. Nielsen, Glenn R. Guntenspergen, Hilary A. Neckles

A wetland classification system was designed for Mt. Desert Island, Maine, to help categorize the large number of wetlands (over 1,200 mapped units) as an aid to understanding their hydrologic functions. The classification system, developed by the U.S. Geological Survey (USGS), in cooperation with the National Park Service, uses a modified hydrogeomorphic (HGM) approach, and assigns categories based on position in the landscape, soils and surficial geologic setting, and source of water. A dichotomous key was developed to determine a preliminary HGM classification of wetlands on the island. This key is designed for use with USGS topographic maps and 1:24,000 geographic information system (GIS) coverages as an aid to the classification, but may also be used with field data. Hydrologic data collected from a wetland monitoring study were used to determine whether the preliminary classification of individual wetlands using the HGM approach yielded classes that were consistent with actual hydroperiod data. Preliminary HGM classifications of the 20 wetlands in the monitoring study were consistent with the field hydroperiod data. The modified HGM classification approach appears robust, although the method apparently works somewhat better with undisturbed wetlands than with disturbed wetlands. This wetland classification system could be applied to other hydrogeologically similar areas of northern New England.

From reader reviews:

Ronald Ralph:

Spent a free time for you to be fun activity to try and do! A lot of people spent their spare time with their family, or their very own friends. Usually they undertaking activity like watching television, planning to beach, or picnic from the park. They actually doing ditto every week. Do you feel it? Will you something different to fill your free time/ holiday? Might be reading a book could be option to fill your totally free time/ holiday. The first thing you will ask may be what kinds of e-book that you should read. If you want to test look for book, may be the reserve untitled Using hydrogeomorphic criteria to classify wetlands on Mt. Desert Island, Maine approach, classification system, and examples: USGS Scientific Investigations Report 2005-5244 can be very good book to read. May be it is usually best activity to you.

Kimberly Wood:

In this era globalization it is important to someone to find information. The information will make anyone to understand the condition of the world. The fitness of the world makes the information quicker to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. Often the book that recommended for you is Using hydrogeomorphic criteria to classify wetlands on Mt. Desert Island, Maine approach, classification system, and examples: USGS Scientific Investigations Report 2005-5244 this guide consist a lot of the information on the condition of this world now. This book was represented just how can the world has grown up. The vocabulary styles that writer use for explain it is easy to understand. Typically the writer made some investigation when he makes this book. This is why this book appropriate all of you.

Yvonne Matz:

This Using hydrogeomorphic criteria to classify wetlands on Mt. Desert Island, Maine approach, classification system, and examples: USGS Scientific Investigations Report 2005-5244 is brand new way for you who has curiosity to look for some information because it relief your hunger info. Getting deeper you upon it getting knowledge more you know or else you who still having little digest in reading this Using hydrogeomorphic criteria to classify wetlands on Mt. Desert Island, Maine approach, classification system, and examples: USGS Scientific Investigations Report 2005-5244 can be the light food for yourself because the information inside this book is easy to get through anyone. These books produce itself in the form which can be reachable by anyone, yep I mean in the e-book web form. People who think that in publication form make them feel sleepy even dizzy this e-book is the answer. So there is not any in reading a publication especially this one. You can find actually looking for. It should be here for a person. So , don't miss it! Just read this e-book kind for your better life in addition to knowledge.

Gerri Pettit:

Publication is one of source of understanding. We can add our understanding from it. Not only for students but also native or citizen need book to know the up-date information of year to year. As we know those books have many advantages. Beside all of us add our knowledge, could also bring us to around the world. With the book Using hydrogeomorphic criteria to classify wetlands on Mt. Desert Island, Maine approach, classification system, and examples: USGS Scientific Investigations Report 2005-5244 we can get more advantage. Don't you to definitely be creative people? Being creative person must prefer to read a book. Just simply choose the best book that suited with your aim. Don't always be doubt to change your life with that book Using hydrogeomorphic criteria to classify wetlands on Mt. Desert Island, Maine approach, classification system, and examples: USGS Scientific Investigations Report 2005-5244. You can more attractive than now.
