J. Robert Oppenheimer: And the American Century David Cassidy

The unexplored secret of the American Century, the last 100 years of US history, is the rise of American science, specifically physics. At the heart of that story is J. Robert Oppenheimer, leader of the Manhattan Project that built the atomic bomb. He was a man of contradictions: a scientist who discovered black holes and then turned his back on cutting edge research; a gentle liberal humanist responsible for the creation of the first real weapon of mass destruction; a genius who founded "scientific militarism" and then let it destroy him. His life story embodies the great conflicts of American society, its genius, its weaknesses, and even its essential morality. How did an aesthete man uninterested in the acquisition of power become the leader of American science, the most powerful research community in the world? And how did he, with all his intellectual and social advantages, lose his power and become regarded by many as an unfulfilled if not failed scientist. While it is biography of a physicist, it is also a history of the 20th century offering insights into the "scientific militarism" behind events on the world stage today.
